

ULTIMAX OCF-MAX

Off Center Fed antenna 3KW Hybrid Balun

Thank you for the purchase of the ULTIMAX OCF-MAX antenna This Model will let you work most bands without a tuner and some bands will required the used of a tuner depending on model choosen.

installation

1- Hoist the transformer box using heavy paracord up the prefer support (Tower or Pole ,etc).

2- Use only high quality coax , no coax choke necessary as the hybrid 4:1 transformer will handle the common modes due to is inboard 1:1 BALUN . Keep the coax running down vertically as possible .

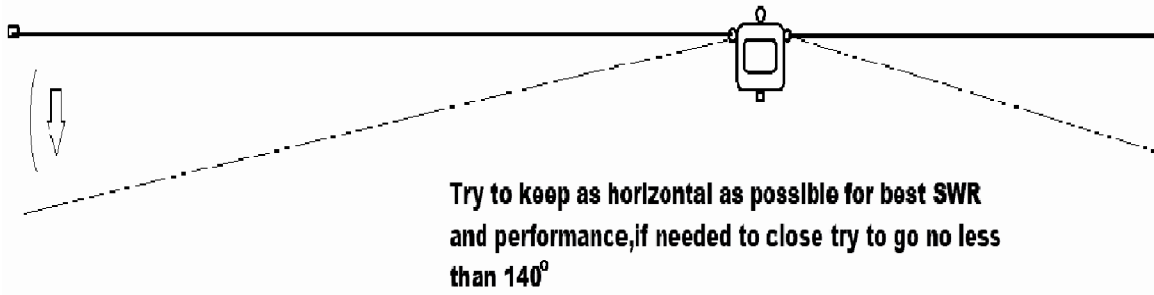

3- Hoist the end of the both antenna wire to a close to Horizontal as possible, if totally horizontal is not possible, try to keep the angle to 140 degrees maximum for proper performance and SWR.

4- Keep the radiating wire away from tree branches or any structures specially metal and use common sense when doing an installation ,Safety first.

5- The antenna will work in WARC bands and 15M with the used of tuner.

6- Important notice, this type of antenna works different at every location, you must work to find the correct and proper location for it , any other antennas can have a saying on SWR and the performance overall.

7- SWR will change according to location and install matter follow the instructions and keep safety firstable.

Thank you again for purchasing an ULTIMAX Antenna. For Customer Support please go to www.ultimaxantennas.com or contact our technical support department at the telephone listed on our website... good DX and 73's .
